

Premier Hosiery Mills (Pvt) Ltd.

Knitted Fabrics | Knitted Garments | Woven Garments | Home Textile

Quality
is an
integral part of
Premier!

"We aim to be one of the finest vertically integrated garment producers of Pakistan specializing in knitted and woven, and also home textile products while providing the best possible service, value and quality to all our customers."

A man with dark, wavy hair is shown from the back and side, looking towards the left. He is wearing a bright red, long-sleeved shirt. The words "Mission Statement" are printed in white, bold, sans-serif font on the upper back of the shirt. The background is a solid, light green color.

**Mission
Statement**

Introduction

Premier Hosiery Mills (Pvt.) Ltd. was founded in the early part of 1950's and the present management took over the unit in the year 1978. Premier is a family owned business. The current result and outcome of Premier is because of the continuous effort of all brothers together forming one solid organization that is capable of facing any challenge.

Premier Hosiery Mills specializes in manufacturing value added knitwear products used in world class promotional campaigns and also deals in corporate wears. In addition, Premier can also deliver quality woven garments and home textile products. In all, there is more than 35 years of working experience behind the success of Premier Hosiery Mills.

Premier Hosiery Mills is responsible to complete the entire process of making the garment and deliver as per the requirement. Most of the production cycle of Premier is carried out in-house. The manufacturing facility possesses state-of-the-art machines, skilled workforce, vast experienced technicians and staff. All this gives a smooth flow to production, which ends up giving finest quality products in time. Premier is ready to move into the new era of style and fashion.

Our Company at a Glance

Knitting

Our newly renovated knitting department consists of a combination of 20 machines of Fukhuara and Ssang Yong that is capable of producing over 100,000 kg of fabric per month. Fukhuara machines are considered to be one of the best in the world when it comes to quality, productivity, versatility, and reliability. Our knitting department operates 24 hrs and is well monitored and supervised at all times with highly skilled machine operators who have been with us since over 20 years.

Dyeing

Dyeing is subcontracted under our technical supervision but it has been carefully chosen so our quality is not compromised. The dyeing house which we use consists of modern plant & machinery. Soft Flow machines of Fongs, high temperature machines of Theis, Heliot and Tubetex Dryers. The dyeing technician has been in the industry for well over 30 years and their knowledge and experience together with the rest of the team gives us good quality which is colour matched, controlled shrinkage, required GSM. Our Dyeing capacity is 160,000 kg per month. Premier is well inline with the current market trends.

Embroidery

Our embroidery department consists of two 20 heads and a 12 heads Tajima Machines. Like Fukuhara, Tajima Embroidery machines don't need any introduction at all. These are one of the world's best embroidery machines and possess high production speed as well. The machine comes with a self cutter, which adds to the quality of production. The production capacity varies with the quantity of stitches of the embroidery design. We always try to produce top quality to meet and exceed customer satisfaction in our embroidery house.

Print

Our printing is managed by extremely technical people of the industry who are well aware of various perimeters in the different processes. The unit possess different forms of printing machines from Octopus (circular), heat transfers and table print. The complete plant has a production capacity of printing over 4,000 pieces in a day. We at Premier aim to deliver crown quality printed garments in time.

Stitching

Stitching is one of the most important phases in production where skilled people are required to work on quality machines to give required output. In our stitching department there are over 200 machines with the combination of Juki, Pegasus and Kansai. Like Fukhuara and Tajima Machines, Juki is also another well known brand in the industry. Some of the people who work here have been with us since 1978. Their skills and experience has grown with the company tremendously. As we keep moving on to the new era of style and fancy items we realize the requirement to update and progress. Our stitching unit maintains quality standards and can produce monthly around either 200,000 plain T-Shirts, 80,000 Rugby-Shirts, 120,000 Polo-Shirts, 140,000 Sweat-Shirts, 100,000 Pajama-Suits, or 30,000 fleece jackets.

Cutting, Pressing & Packing

In cutting, pressing & packing, the human resources that we use work on their duties very sincerely and they have been with the company for a long time. In cutting dead cotton, holes, unevenness, dyeing faults, shade variation, needles marks from knitting get reported and are rectified in the first instance. Our pressing and packing department is well managed and is always inline with the overall production cycle.

Quality Control

Quality control is the most essential aspect in production. There are multiple points for each of the stages of production where the fabric/garment gets checked in our industrial unit. Each member of our team at their own level makes sure that the order is processed appropriately. At Premier, Quality means to produce as per the requirement and to meet and exceed the satisfaction of the customer by all means. Quality is never jeopardized at any cost when a product is developed and delivered. We have two separate checking departments where the order is processed after completing the whole cycle of production. Highly trained and experienced staff is used in the checking department. We put great effort in training and educating our checking staff on regular basis to follow all the guidelines of the order and company. We are also ISO 9000:2000 certified.
